1.	Mr. Zoltan Makai, Oradea	express his opinion	<p>My name is Zoltán Makai and I have been working in the field of energy since 40 years. The two presentations were quite convincing for me, I would like to support what have been heard namely that Hungary invests in nuclear energy on purpose. It is well known that renewable energy sources need to be further developed, but the energy supply cannot be based solely on these resources.</p> <p>It is well known that on the summer of 2015, the Romanian electricity system would have been temporarily collapsed due to the arid climate situation experienced in Europe unless the operation of Cernavoda NPP and other base-load PPs. Other countries in Europe, like Finland and Great Britain, as well as the countries of CIS, all recognised the necessity of this energy source, indeed Slovakia is about to finalise its investment project of Mohi NPP.</p> <p>Romania also intends to develop Unit 3 and 4 at the Cernavoda site. I am in a fortunate position, since I was part of the Romanian delegation visited the Paks site recently, where I was personally convinced how this issue is dealt with by the Hungarian nuclear experts. I was also impressed by the simulator center of Paks NPP where the operators of the NPP are trained being unique in its sense in Europe. The surrounding of the Paks NPP is quite crowded but it does not pose any extra risk for the population living nearby, think about other NPPs in the world which are operating in similar environment.</p> <p>Concerning the safety operation of Paks NPP, it is among the safest ones in the world. As an engineer, and being member of the Transylvanian Hungarian Scientific and Technical Association, I fully support this investment. I am very glad that that the Hungarian Delegation represented itself in such a serious manner and maintains the necessity of the project. Good luck to your work!</p>
2.	Mr. Andras Perger, GREENPEACE, Hungary	My name is András Perger and I have a couple of questions concerning the procedure itself. I represent the Greenpeace Hungary

		<p>here, let me therefore speak in Hungarian. Thank you for the possibility of making comments here, in Romania as well. We especially appreciate that there are three public hearings in Romania, which is exactly two more than organised in Hungary. I have two questions to the Romanian Authorities:</p> <p>2.1. The first one is that we would like to know the exact date and time of the public hearing to be held in Bucharest or the date when it is going to be announced. Originally it was scheduled on the 30th, this Wednesday, but we realised only last Friday that the date had been changed.</p> <p>2.2. My other question is whether the Romanian ministry is aware of the supplementary documents submitted by the proponent previously required by the Hungarian licensing authority, and whether the Romanian ministry was notified about it by its Hungarian Party.</p>	<p>2.1. <u>MEWF answered:</u> Concerning the public hearing, it was announced to be held at 4 PM on the 30th of September earlier, about which all the details have already been announced on our website. According to the request of the Hungarian party, we modified this date. Bearing in mind that this delegation representing the Hungarian party is the same on all the three events (today Ordea, tomorrow Timisoara, Wednesday in Bucharest) and due to the long distance between the sites in our country, it seems impossible to realize it. Indeed minutes of this public hearing has to be finalized on the spot in English which also requires quite a lot effort from the Delegations.</p> <p>2.2. <u>MEWF answered:</u> Please clarify the question. What documentation you exactly mean by supplementary information?</p> <p>András Perger: As far as I know, the licensing authority demanded four times supplementary documentation from the proponent, the last one was due in June 2015.</p> <p><u>MEWF:</u> The official EIA report was transmitted on 2nd of April 2015. We do believe that the Hungarian Party will send all the documentations according to the transboundary procedure.</p>

			<p><u>Representative of Government Office of Baranya County:</u> In my introductory presentation, which was sadly missed by Mr. Perger, one could see that we demanded four times supplementary documentation which is available for the public in three languages, in English, in German and in Hungarian at the website of the licensing authority and the governmental website being the official homepage of the transboundary cases. The first one was required in the end of last year, while the other three in 2015. All of them were fulfilled by the proponent in time. I would not like to go into details regarding their contents, all the documents are available online, I am pretty sure that Mr. Perger knows them.</p> <p>The answer was considered satisfactory. András Perger: Let me turn back to the exact date of the public hearing to be held in Bucharest. When it is scheduled or if it is not known yet, when you are going to announce it?</p> <p><u>MEWF:</u> We still need to fix the dates, but according to our preliminary discussions with the Hungarian Party, the event is to be held on week 42 (12-16 October). Tomorrow the procedure continues in Timisoara, after that the date will be announced on the Internet on Thursday on the 1st of October.</p> <p>András Perger: Thank you!</p>
3.	Mrs. Totorean Adriana, Oradea	My question is whether Romania will be a transit country regarding the plans of the transportation of spent fuel toward the Russian Federation? Will the radioactive waste transit Romania?	<p><u>Representative of the developer:</u> The short answer is NO ! Romania is not considered being a transit country regarding the transportation of spent fuel toward the Russian Federation.</p> <p>The longer answer is that the transportation of both fresh and spent fuel is carried out through Ukraine by rail. There is no plan for transporting fresh or/and spent fuel through Romania.</p>

No.	Name/Organisation	Question	Answer
			The answer was considered satisfactory.
4.	Mr. Calin Corpas, Oradea	Is there any plan on importing uranium from Romania? as natural uranium has been mined in County Bihor which can be enriched.	<p><u>Representative of the developer:</u> The European Commission has published a communication on the security of energy supply. This communication applies to both nuclear and fossil fuel sources. As the Commission asked, Hungary continuously explores the possibility of diversification of fuel sources. Although it is not urgent as the new units start operating in ten years and the fuel supply is ensured for the first part of the operating period. Later on – after the first part of the operating period mentioned – it would be possible that the natural uranium was purchased from the global market from one of the actors. The uranium global market works very well, in case we should face this task this could be solved from the global market.</p> <p>The answer was considered satisfactory.</p>
